

Issues (maybe, maybe not)

- ⦿ Can L3 packages *override* (replace) definitions in Core like **SIdRef**?
 - No—but need to check implications for required attributes
- ⦿ Avogadro's number is in units of item; you're crazy to redefine it
- ⦿ Why bother with **volume/area/lengthUnits** — just have lengthUnits
- ⦿ Should Constraint be kept in the Core?
- ⦿ Should packages such as layout, groups use **metaid** or **id** or **XP***?
 - Basically: how should we refer to XML elements?
- ⦿ Keep new '**compartment**' attribute on **<reaction>**?
- ⦿ Losing SpeciesType means losing some aspect of species identity
